EXPERIMENT 13

Question: Write the Python program to implement Minimax algorithm for gaming.

Aim :

To write and implement a Python program using the Minimax algorithm to determine the best move in a Tic-Tac-Toe game.

Algorithm:

Start the program.

Initialize the Tic-Tac-Toe board with empty positions.

Display the board and allow the human player to enter a move.

Check whether the move is valid.

Check whether either player has won or the game is a draw.

Generate all possible moves for the computer.

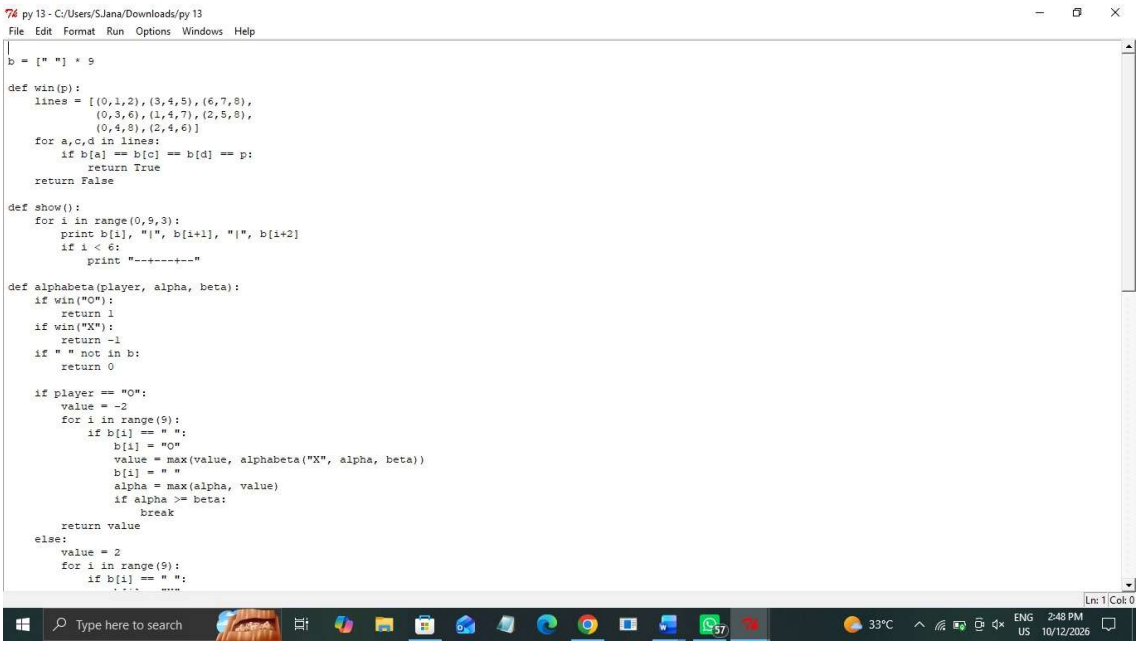

Apply the Minimax algorithm to evaluate possible moves and select the best move.

Repeat the process until a player wins or the game ends in a draw.

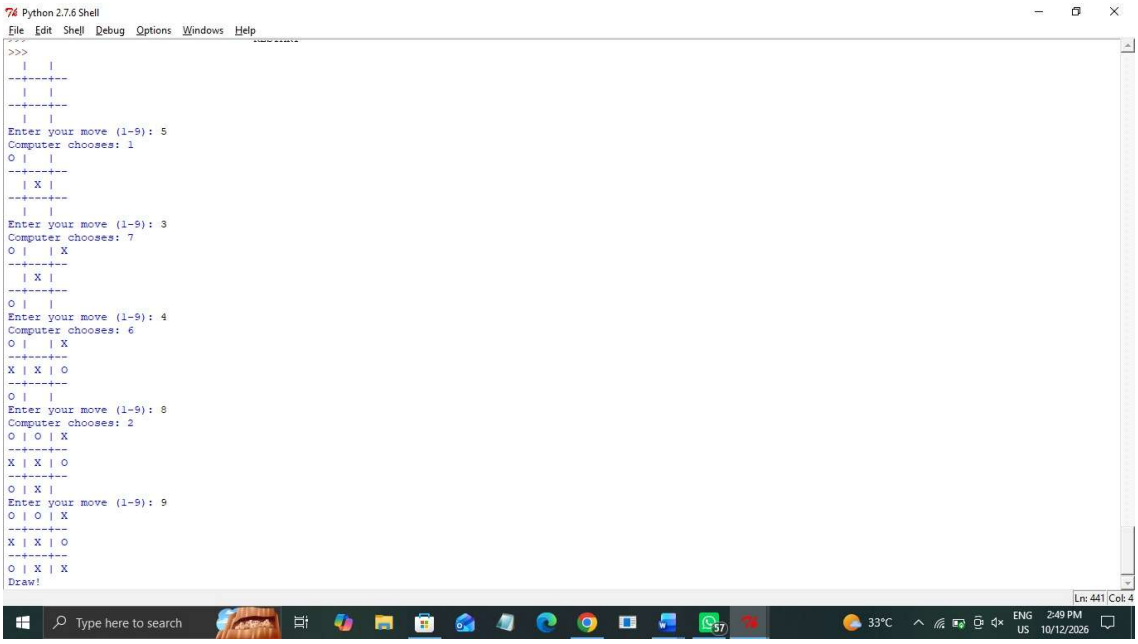

Display the final board and the result.

Stop the program.

Code:

Output:

Result:

Thus, the Python program demonstrating decision-making using a tree-like structure was executed successfully, and the appropriate decision was displayed based on the given weather conditions.
